EXAMINER

CHOWDHURY, TARIFUR RASHID

ART UNIT

PAPER NUMBER

2871

DATE MAILED: 12/06/2001

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	08/811,152	HIRAKATA ET AL.	
	<b>Examiner</b> Tarifur R Chowdhury	<b>Art Unit</b> 2871	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 06 November 2001.
- 2a) This action is FINAL.                  2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1-137 is/are pending in the application.
- 4a) Of the above claim(s) 1-3, 11-20 and 28-137 is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_\_ is/are allowed.
- 6) Claim(s) 4-10 and 21-27 is/are rejected.
- 7) Claim(s) \_\_\_\_\_ is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) The proposed drawing correction filed on \_\_\_\_\_ is: a) approved b) disapproved by the Examiner.  
If approved, corrected drawings are required in reply to this Office action.
- 12) The oath or declaration is objected to by the Examiner.

#### Priority under 35 U.S.C. §§ 119 and 120

- 13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All b) Some \* c) None of:
1. Certified copies of the priority documents have been received.
  2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) The translation of the foreign language provisional application has been received.
- 15) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

| 3) <input checked="" type="checkbox"/> Information Disclosure Statement(s) (PTO-1449) Paper No(s) <u>10</u> . | 6) <input type="checkbox"/> Other: _____ .                                   |

**DETAILED ACTION**

***Election/Restrictions***

1. Claims 1-3, 11-20 and 28-137 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 9.

***Priority***

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Specification***

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

**6. Claims 4-8, 10, 21-25 and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamazaki et al. (Yamazaki), USPAT 5,815,226 in view of Yanagawa et al. (Yanagawa), USPAT 5,734,451.**

7. Yamazaki discloses and shows in figures 4A-4B, a liquid crystal display device (col. 1, line 6) comprising:

- a substrate (301) (figure 3A) comprising:
  - a second interlayer insulating film (315) (applicant's first interlayer insulating film) made of an organic resin material (col. 6, lines 22-23);
    - a pixel line (318) and a pixel electrode extending from the pixel line, which are formed on the first interlayer insulating film (315);
      - a third interlayer insulating film (317) (applicant's second interlayer insulating film) and a common electrode (316), the common electrode being a black matrix ;
        - a liquid crystal layer held on the substrate; and
        - a storage capacitor (319) formed by at least parts of the pixel line (318) and the black matrix (316) which parts coextend on the first interlayer insulating film (315) with the second interlayer insulating film (317) interposed in between.

Yamazaki differs from the claimed invention because Yamazaki does not explicitly disclose that the liquid crystal display device is an in-plane switching type device, i.e., the liquid crystal layer being driven by an electric field formed

between the pixel electrode and the common electrode, the electric field having a component parallel with the substrate.

Yanagawa discloses an in-plane switching type liquid crystal display device wherein the liquid crystal layer is driven by a parallel electric field formed between the display electrode (applicant's pixel electrode) and a reference electrode (applicant's common electrode) (col. 1, lines 13-22). Yanagawa further discloses that a liquid crystal display device employing the so-called in-plane switching method allows the viewer to recognize a clear image over a wide range of visual field (col. 1, lines 23-28).

Yanagawa is evidence that ordinary workers in the art of liquid crystal would find the reason, suggestion or motivation for employing in-plane switching method.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the liquid crystal display device of Yamazaki such that the liquid crystal layer is driven by a parallel electric field formed between the pixel electrode and the common electrode so that the viewers are capable of recognizing a clear image over a wide range of visual field, as per the teachings of Yanagawa.

Accordingly, claim 4 would have been obvious.

As to claim 21, even though Yamazaki does not explicitly disclose/show the second substrate, since Yamazaki discloses that his invention is related to a liquid crystal display device (col. 1, lines 6-7) and conventional liquid crystal display devices includes two substrates opposed to each other to hold the liquid crystal material there-between, one of ordinary skill in the art of liquid crystal would easily find a reason,

suggestion or motivation to employ a second substrate opposed to the first substrate so that it can hold the liquid crystal material there-between when forming a liquid crystal display device.

As to claims 5 and 22, Yamazaki discloses that the pixel electrode has a width in a range of 1000 to 1200 Å, which is equal to 0.1 to 0.12 µm (overlaps the claimed range) (col. 6, line 59).

As to claims 6 and 23, Yamazaki discloses that the third interlayer insulating film (applicant's second interlayer insulating film) is made of an organic resin material and has a relative dielectric constant larger than that of the second interlayer insulating film (applicant's first interlayer insulating film) (col. 6, lines 42-46).

As to claims 7 and 24, Yamazaki discloses that the material for the third interlayer insulating film (applicant's second interlayer insulating film) is not limited to organic resins. Inorganic dielectric films having larger relative dielectric constants can also be used. Preferably, a silicon-oxide based is used as such inorganic dielectric film (col. 6, lines 49-53).

As to claims 8 and 25, Yamazaki discloses that the second interlayer insulating film (applicant's first interlayer insulating film) has a thickness in a range of 0.1 to 5.0 µm (col. 6, lines 18-19) and the third interlayer insulating film (applicant's second interlayer insulating film) has a thickness in a range of 0.1 to 0.3 µm (col. 6, lines 40-41).

As to claims 10 and 27, it is clear from figure 4B of Yamazaki that the second interlayer insulating film (315) (applicant's first interlayer insulating film) exhibits excellent flatness and thus serves as a planarization film.

8. **Claims 9 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamazaki as applied to claims 1-8, 10, 21-25 and 27 above and in view of Yamazaki et al., USPAT 5,814,834.**

9. Yamazaki discloses a liquid crystal display device comprising a thin film transistor connected with the pixel electrode and having, as an active layer, a semiconductor layer. See Fig. 4B.

Yamazaki differs from the claimed invention because he does not show that the semiconductor layer is separated into a base and a floating island region.

Yamazaki et al., discloses a thin film transistor having as an active layer, a semiconductor layer that is separated into a base region (107) and a floating island region (103-106) (Figure 1). Yamazaki et al. further disclose that such an arrangement is advantageous since it decreases a leak current and improve an ON/OFF ratio in a thin film transistor (col. 2, lines 22-31).

Yamazaki et al. is evidence that ordinary workers in the art of liquid crystal display device with thin film transistors would find the reason, suggestion or motivation of using a thin film transistor having as an active layer, a semiconductor layer that is separated into a base region and a floating island region.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the thin film transistor of Yamazaki such that the semiconductor layer is separated into a base region and a floating island region to decrease a leak current and to improve ON/OFF ratio of the thin film transistor, as per the teachings of Yamazaki et al.

Accordingly, claims 9 and 26 would have been obvious.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tarifur R Chowdhury whose telephone number is (703) 308-4115. The examiner can normally be reached on M-Th (6:30-5:00) Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William L Sikes can be reached on (703) 305-4842. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7724 for regular communications and (703) 308-7724 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1782.
